AVIOR COMPUTING ANNOUNCES 2008 COMPLIANCE SURVEY RESULTS

Survey Finds Organizations Have More Work To Do In Optimizing Compliance Programs And Processes

NASHUA, NH, July 10, 2008 – Avior Computing, Inc., announced today the results of a bi-annual survey on compliance progress and issues.

Overall, the survey found that organizations are making progress in achieving compliance, but a surprisingly large number of organizations are either still treating each compliance regulation as an individual project, or using manual methods and tools to test for and manage compliance, or both. Key survey response findings include:

- Organizations are still largely treating each compliance regulation as a separate project or silo. 43% of respondents are operating this way, while 28% indicate that they are working towards a unified compliance process, and another 28% have achieved a unified process.
- Assessments are an area where some optimization needs to occur: 70% of responding organizations use separate assessments, one per regulation, while 30% are using a unified assessment spanning multiple regulations.
- Spreadsheets and databases remained the most popular tools used to manage and track compliance, while compliance automation tools were used by 42.5%.

The full survey report will be available on the Avior website at www.aviorcomputing.com, or by contacting us at info.aviorcomputing.com.

“It is not surprising that organizations continue to struggle with mapping of multiple regulations to common controls and to assessment questions” said Steve Katz, President of Security Risk Solutions, and former CISO of Citigroup, Merrill Lynch, and JP Morgan. “Managing the compliance process with manual approaches will continue to be challenging for organizations with multiple regulations and standards.”

Avior plans a follow-on survey in the fall of 2008 to explore some of these compliance process issues in more detail.

“IT organizations are besieged with compliance audits and reporting status requests, and the various stakeholders in the organization are experiencing survey fatigue from completing multiple overlapping assessments.” said Steve McCalmont, Avior Computing CEO. “Our clients tell us that implementing leveraged approaches to compliance mapping and assessments allow them to be far more effective in their compliance processes, and to get more done with less manual labor.”

About Avior Computing

Founded in 2003 by software and networking industry veterans, Avior Computing is a leading innovator in compliance management solutions. Avior ClearView is a dynamic SaaS mapping application that automates the mapping of regulations, standards, controls, and assessment questions. Avior BenchMark automates the process of assessing and managing compliance for applications such as vendor risk and information privacy. Avior BenchMark replaces costly and cumbersome manual assessments involving spreadsheets and word documents with a streamlined and automated process, enabling better risk decision-making, and significantly reducing the pain and cost of manual assessment activities.
