

AVIOR COMPUTING COMPANY BACKGROUNDER

Avior Computing Corporation is a leading innovator in compliance management solutions. Founded by enterprise software and networking industry veterans, Avior's products ease the pain and reduce the cost of Governance Risk and Compliance processes. Avior provides organizations with real-time views and actionable information on their enterprise risk compliance status. Avior delivers two solutions to assist in enterprise GRC, Avior BenchMark, and Avior Clearview.

Avior's BenchMark solution supports compliance regulations and initiatives such as: Sarbanes-Oxley, GLBA/FFIEC, COBIT, PCI, HIPAA, 5010, ICD-10 and various state and international privacy laws. Avior BenchMark is available as a hosted solution, or on an appliance for deployment at the enterprise. Avior BenchMark includes Knowledge Modules that provide specific templates, pre-built workflows, and tailored reports for specific compliance applications. With the help of our Knowledge Partners, Avior BenchMark provides complete solutions for Vendor Risk Management, Information Privacy Assessment, and Anti-Money Laundering/Bank Secrecy Act compliance assessment and many more. Avior BenchMark replaces costly and cumbersome manual assessments involving spreadsheets and word documents with a streamlined and automated process, enabling better risk decision-making, and significantly reducing the pain and cost of manual assessment activities.

For organizations subject to more than one regulation or standard, mapping of compliance requirements to controls and assessment questions is a significant challenge. The problem is compounded by the fact that regulations and standards change over time, as do the controls that organizations use. Developing and maintaining associations between specific regulatory requirements, standards, controls, and assessment questions requires significant effort, and is a costly part of the compliance challenge. Many organizations treat compliance as individual projects within organizational silos. This approach is inefficient, and results in a duplication of effort and

unnecessary expense. Avior's patent-pending ClearView solution provides a new approach to developing and maintaining dynamic regulatory mappings. Provided as a Software as a Service application, ClearView uses a relational database to dynamically model and map compliance regulations, frameworks, standards, frameworks, guidance, and policies/controls. ClearView provides an extensive set of controls with mappings to the various regulations and standards. In addition, Avior's solutions provide an extensive library of assessment questions that can be used to test the compliance status of controls and policies. Avior ClearView includes pre-built mappings for the most prevalent regulations. See website for details on currently supported regulations, frameworks, standards, frameworks and guidance.

Avior's clients include leading Fortune 500 financial services firms, insurance companies, service providers, and other organizations impacted by compliance regulations.

Avior is based in Nashua, NH. For further information on Avior and our compliance solutions, please visit www.aviorcomputing.com .
