

Avior Computing Fact Sheet

Overview: Avior Computing develops and delivers compliance process management solutions that enhance the effectiveness and reduce the cost of complying with regulations and standards.

Founded: Avior Computing was founded at the end of 2003.

Market: Avior's products, BenchMark and ClearView, are compliance management solutions that help companies to more effectively comply with applicable regulations. Various market analysts characterize the market for such solutions as an extremely fast growth industry, with industry market estimates ranging from the high 100s of millions to more than \$1 billion.

Clients: Avior's clients include Fortune 100 financial services firms, service providers, insurance companies, and other organizations.

Products: Avior provides organizations with real-time views and actionable information on their compliance and risk position for both internal as well as third-party (vendor) applications. Avior has two primary products, BenchMark and ClearView. Avior Computing's flagship product, Avior BenchMark, is a compliance process management solution that ensures that managers have real-time access to critical information for timely and effective decisions that reduce risks and the consequences of non-compliance. BenchMark automates compliance assessments, eliminating time-consuming manual processes. In many industries, companies must monitor and document compliance with a host of regulations. Others must demonstrate conformance to industry and corporate standards to ensure continued professional certification, and all organizations must maintain records that can withstand both internal and external review and audit. The cost and complexity of this process – along with the risk of non-compliance – grows with the types, numbers and locations of data sources. Avior BenchMark offers a new and revolutionary way to cooperatively collect widely distributed compliance and risk data. Avior BenchMark can produce critical and timely information for such applications as regulatory compliance, vendor risk management, data privacy assessments, and others. Avior BenchMark is available as a hosted solution (SaaS), or on an appliance for deployment at the enterprise.

For organizations subject to more than one regulation or standard, mapping of compliance requirements to controls and assessment questions is a significant challenge. Avior ClearView is revolutionary new patent-pending application that simplifies and automates compliance mapping. ClearView enables compliance managers to reduce the effort expended on compliance mapping, and to greatly reduce associated initial and on-going costs.

Regulations: Avior solutions support numerous regulations and standards. As a compliance assessment solution, the BenchMark solution is extensible to support all regulations and standards. BenchMark is shipped with Knowledge Modules for numerous specific regulations, including: BITS SIG, Data Privacy, HIPAA, Bank Secrecy Act and Anti-Money Laundering regulations, ISO27002, GLBA. Avior ClearView includes pre-built mappings for ISO27002, BITS SIG, PCI DSS v1.1, GLBA, HIPAA, numerous state privacy regulations, Bank Secrecy Act and Anti-Money Laundering regulations, and others.

Headquarters: 11 Perimeter Rd., Nashua, New Hampshire 03063
