AVIOR COMPUTING SIGNS FOUR NEW ENTERPRISE CLIENTS FOR BENCHMARK AND CLEARVIEW COMPLIANCE MANAGEMENT SOLUTIONS

New clients include two large healthcare payers, a service provider to large financials, and a large publishing company, each sees dramatic ROI by implementing compliance management solutions

NASHUA, NH, December 2, 2009 – Avior Computing Corporation announced today that several significant new clients have recently purchased and implemented the firm’s BenchMark and ClearView compliance management solutions.

The four clients include two healthcare insurers (one a Fortune 500 and the other a global insurer) a major provider of processing services to the Canadian banking industry, and a top-20 publishing company.

The four firms share a common need to manage their organizations to comply with multiple regulations, including GLBA/FFIEC, PCI, Health Insurance Portability and Accountability Act (HIPAA), HITECH, state data privacy laws, and other regulations. The firms are implementing Avior’s BenchMark and ClearView solutions to manage compliance to these regulations.

Each of these new clients will use the Avior ClearView dynamic web service mapping solution to automate the mapping of regulations, standards, controls, and assessment questions. They will also use Avior’s BenchMark assessment solution, which automates the process of assessing and managing compliance for applications such as vendor risk and information privacy. Avior BenchMark is available either in SaaS or premise based solutions. The Avior compliance management solutions help compliance and risk professionals to be more effective in their compliance management programs, while expending far less manual effort.

Despite the challenging economy, Avior has seen tremendous interest in their compliance management solutions, and increasing customer adoption momentum, even in the difficult financial services sector. In addition, Avior has continued to expand the scope of the compliance management offerings in two dimensions:

- Significant new functionality has been added to BenchMark in the areas of advanced reporting, dashboards, integration with the ClearView web service API, and remediation management
- Significant new support for additional regulations in ClearView, including PIPEDA, ISO 27002, PCI DSS, GLBA/FFIEC, GAPP, HIPAA, and many others, as well as new assessment question libraries for BenchMark supporting these same regulations

“This endorsement by additional new customers validates our technology, our SaaS and premise-based software delivery models, and ultimately the value equation for our compliance solutions” said Steve McCalmont, Avior Computing CEO. “Our clients tell us that implementing leveraged approaches to compliance mapping and assessments allow them to be far more effective in their compliance processes, and to get more done with less manual labor.”

About Avior Computing

Founded by industry veterans, Avior Computing is a leader in automated compliance management. Avior ClearView is a dynamic Web service that automates the mapping of regulations, standards and controls to electronic assessment questionnaires. Avior BenchMark automates the process of developing compliance policies and procedures from overlapping and redundant privacy regulations, and is available as either a SaaS or premise-based solution.
